myLoc managed IT

Individual IT Solutions Since 1999

About myLoc

Since 1999 myLoc managed IT AG has operated Data Center in Düsseldorf while developing innovative hosting solutions tailored to your needs. myLoc managed IT AG now operates three carrier-neutral Data Center with a total area of 2,500 m² housing more than 12,500 servers. myLoc managed IT AG has been a subsidiary of virtual minds AG of Freiburg, Germany since 2006.

In 2009, myLoc managed Infrastructure AG merged its collocation operations with fast IT GmbH's hosting business to become myLoc managed IT AG. The merger of the two subsidiaries created a single, trusted source for both colocation and managed services. Strengthened by this fusion, myLoc now operates its own datacenter facilities managing its customers' servers with its own personnel. Our more than 50 employees enable us to provide 24/7 support.

After our latest round of development, our three carrier-neutral Data Center will have room for up to 65,000 servers. And because we value security, myLoc managed IT AG is the proud owner of the world's largest Lampertz LSR18.6 security room.

We now offer comprehensive managed solutions in our expanded managed hosting division, starting from a simple dedicated server and going all the way up to complex server farms with HA clusters, firewalls and load balancers. Our expanded managed hosting also enables us to combine our managed hosting services with our existing colocation offerings.

Overview: Facts & Figures

- *Founded in 1999*
- *More than 50 employees*
- *We host and operate more than 12,500 of our own servers*
- *Three carrier-neutral Data Center with room for up to 65,000 servers*
- *The world's largest Lampertz LSR18.6 security room*
- *Multiply-redundant IP backbone with multiple 100 Gbit external connections*
- *CHP plant for electricity and cooling scheduled to go online in 2013*

The New Home for Your IT

Cost Savings
Colocation
Outsourcing
Security

Flexible datacenter solutions from myLoc managed IT AG enable you to safely and securely operate your IT environment in a high-availability, modern Tier III+ datacenter with redundant USV, generator and cooling systems.

All your projects, large or small, benefit from special access-controlled datacenter facilities with electronic security locks, camera surveillance, 24/7 onsite support and security patrols.

The wide range of available carriers makes it easier to connect IT environments located at myLoc to the Internet while enabling direct connections from distributed data-center locations with Ethernet or fiber optic services. You choose the carrier you want to work with.

Clients from a wide range of industries have relied on myLoc's datacenter services for years. The myLoc team has built deep trust and personal connections with our customers thanks to our comprehensive expertise in all areas of operations, technology, support and security. We'll be happy to arrange a personal tour of the myLoc Data Center in Düsseldorf.

Managed Solutions for Your IT

Flexible
Managed Hosting
Availability
Individual Solutions

Our managed hosting offers you the opportunity to flexibly design your own server environment. Options range from a single server to high-availability clusters supported by hardware and load balancers. myLoc's managed hosting focuses not on selling individual products but rather on providing customer-specific IT solutions.

You'll receive competent advice from our sales and tech teams, free of charge, even in the early planning stages. Personal contacts and flat hierarchies ensure frictionless communication and fast project success.

After implementing your project, our account manage- ment team will stick with you all the way and we'll adapt our infrastructure to your needs whenever necessary.

All our managed hosting solutions benefit from our exceptio- nal datacenter infrastructure and are cooled by our own warm/cold aisle system. Our managed hosting division has its own datacenter facilities distributed across three indepen- dent Data Center. Every area has redundant USV facilities, backup network connections, an argon fire suppression system and a high-performance cooling system.

Our Data Center: Just The Facts

Data Center

- Three Tier III+ Data Center in Düsseldorf with their own independent infrastructures
- 2,500 m² datacenter area with room for up 65,000 servers
- The world's largest Lampertz RZ security cell with approx. 1,000 m² space
- More than 1,000 m² expansion space available
- CHP plant onsite for electricity and cooling
- Choice of more than 10 carriers

Backbone

- Connection to your own backbone at your request
- Customer connection to backbone with up to 100 Gbit bandwidth
- Guaranteed network availability of up to 99.95%
- IPv4 and IPv6 IP addresses provided according to RIPE guidelines

Electricity

- 99.95% electricity availability – guaranteed
- Only USV power with additional backup thanks to emergency power supplies
- Redundant power supplies for servers available
- Up to 10 kW per m² available

Access & Security

- 24/7 access
- 24/7 video surveillance of entire area and facility
- 24/7 monitoring by security service
- Fire detection with direct connection to fire department
- Argon fire suppression system for efficient, non-damaging fire suppression

Cooling

- *Highly-efficient and environmentally-friendly air conditioning thanks to GE cooling systems*

- *(N+1) redundance of entire cooling system*

- *Hot/cold aisle principle for dealing with large heat burdens (up to 10kW/m²)*
